Game Design Document

Opera Project File Guide

Created @ 2022/10/12
Serious Games - Opera Team
Unity Version: 2021.3.8f1

1. Client and Goal

- Göteborg Opera wants a game for **young adults** (age 18 - 35) in order to attract them to the opera. The client specifies that this particular demographic is currently unlikely to buy tickets to the opera.
- They suspect this may be due to a lack of media that this age group is interested in, and they are looking for ways to reach this target group through a serious game.
- The client also emphasizes that it is important for them to show the effort behind the scenes of the Opera to the players, which is largely invisible to the regular Opera audience.

Therefore, this Serious Game Project focuses on:

- **Creating awareness for backstage and production side** of the Opera.
- Attracting people to the Opera by generating interest around the Opera.

2. The Opera

- The team's field trip observations were one of the biggest inspirations for system design. A summary of the findings:
- Main stage consists of: Performance stage, Side stage, Down stage and an Orchestra pit.
- The workshops include: Blacksmiths, carpenters, Technician rooms, Prop rooms, Light control rooms, etc.
- Development Timeline (on Average)
 - Project preparation - 1.5 years ahead
 - Initial idea discussion - 1 year ahead

-Confirmation - 10 months ahead

-Technical coordination and production - 8 months

-Artistic production - 5-3 months

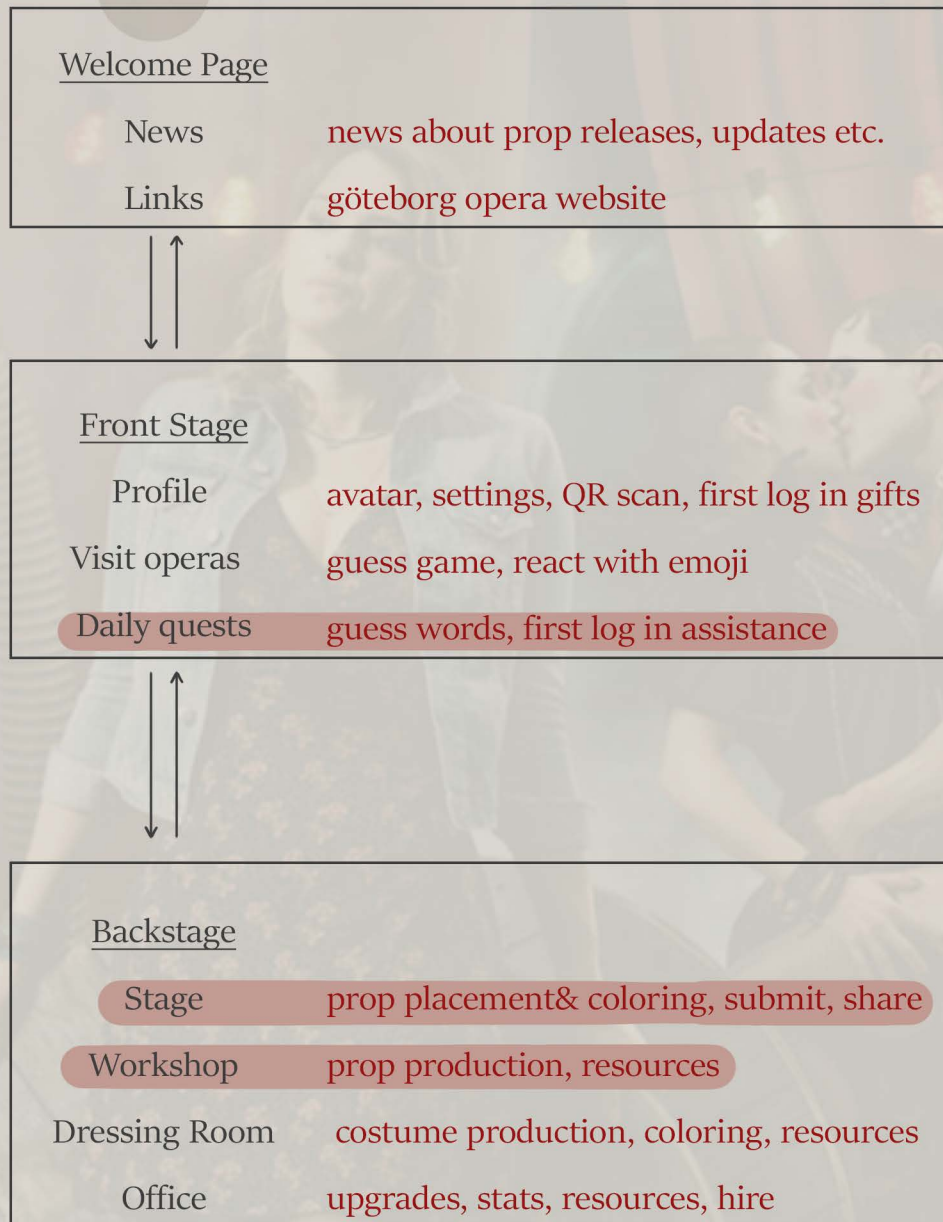

3. Inspirations

- Pictionary: **Guessing images** were implemented as a main mechanic, which was translated as guessing opera scenes.
- Animal Crossing: Creation and customization and visiting mechanics were discussed during system development.
- Spirit Farer: Section views and management aspects were analyzed.

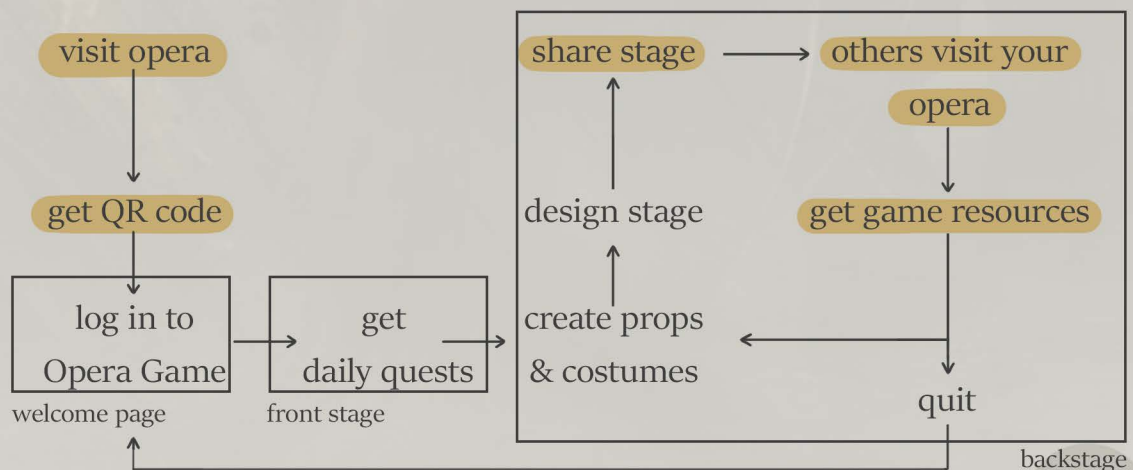

4. Medium

- Intended medium: Phones
- Target audience: Young adults 18-25
- Experience: Casual, simple, relaxing
- Main aesthetic: Player expression
- Features: Management, Guess-the-word, emoji-only social interaction

Main Flow

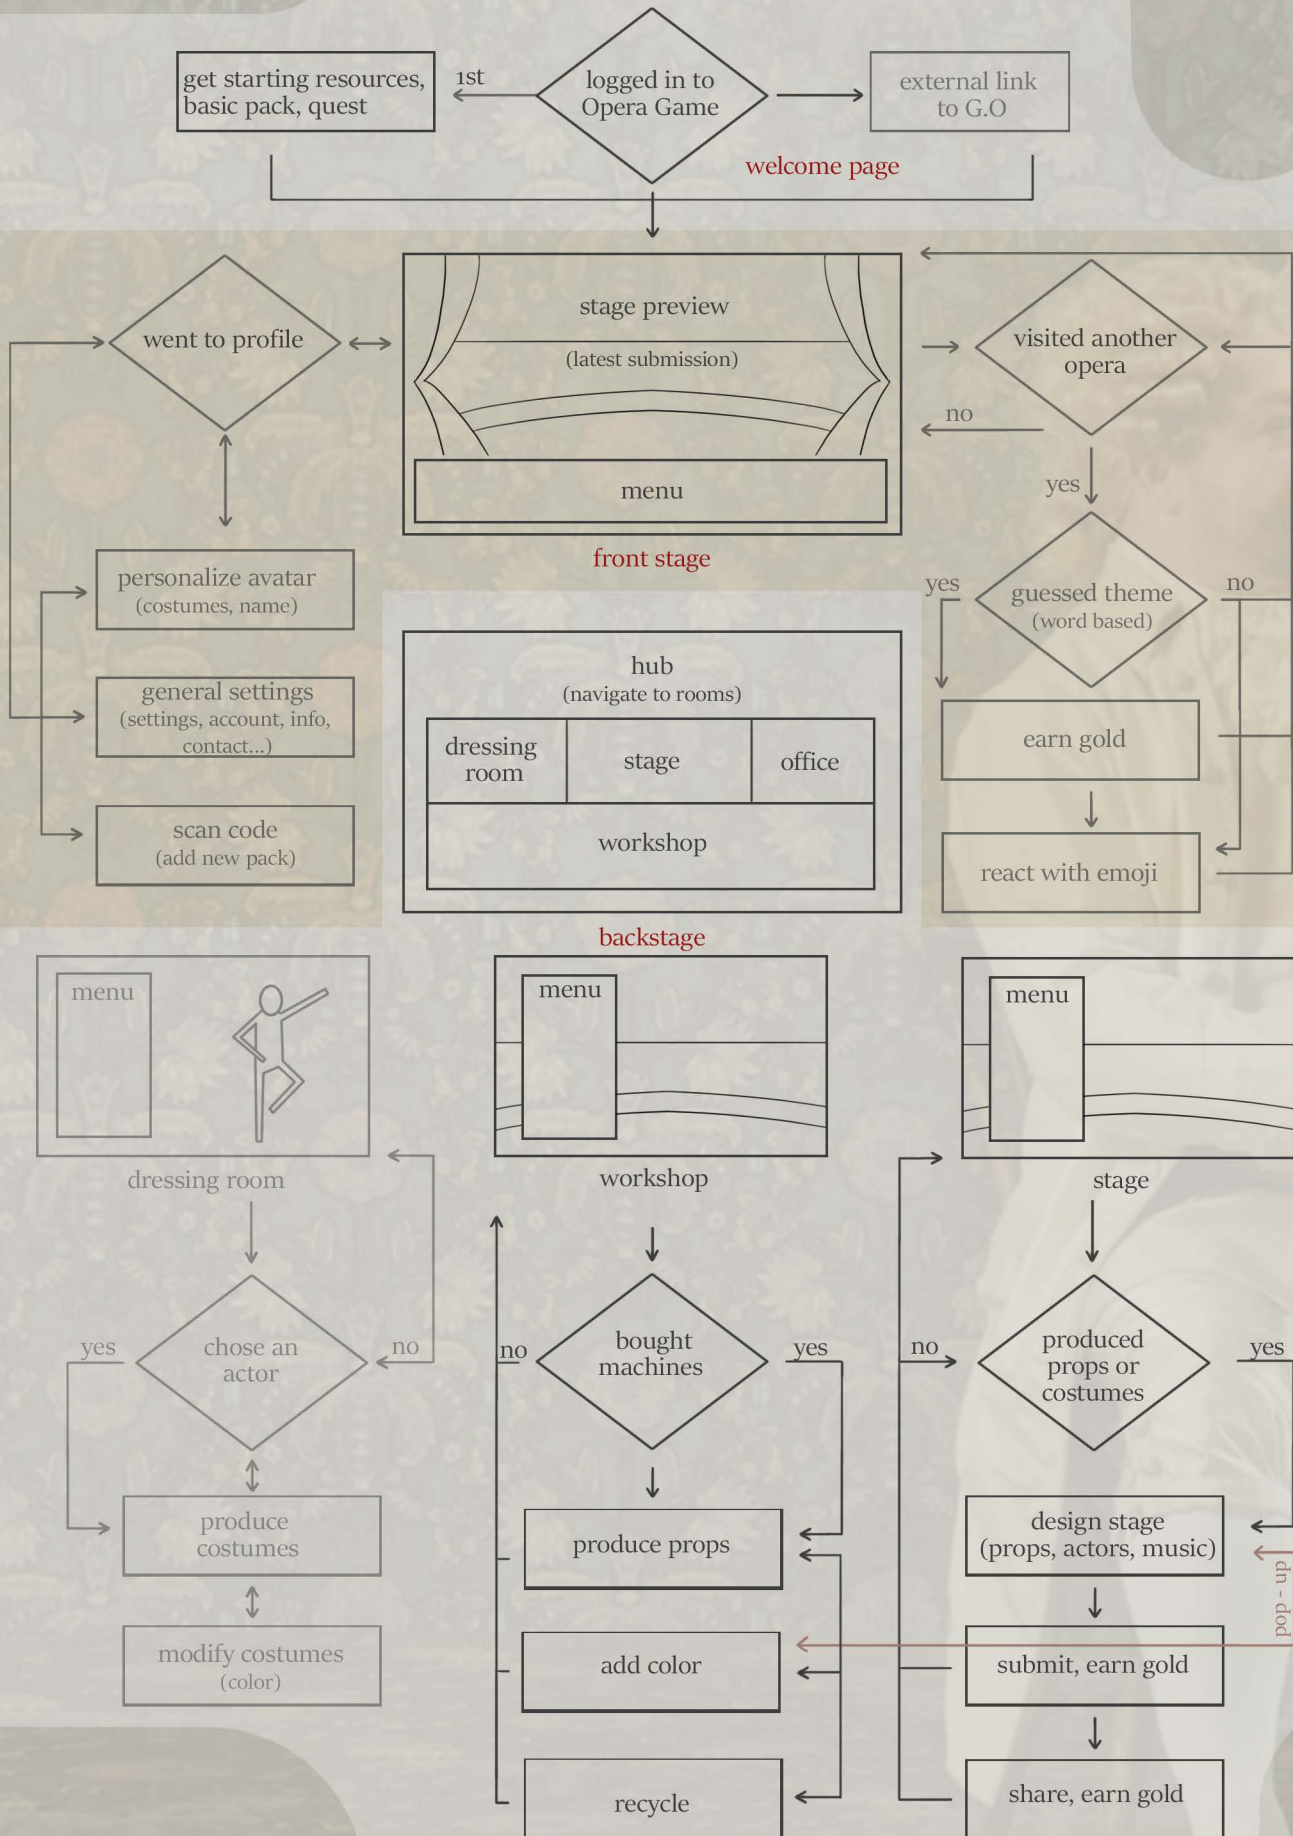

Game Loop

symbolic implementation of mechanics for this prototype

focus areas for this prototype

Flow Chart

Management

1. Meetings and Communication

◦The team has established regular meeting days to work together, and iterate on development. Discord was chosen as official online communication platform.

2. Roles

Yifei Yan - Oliver: Programming, UI Design
Yuting Qiu - Jennifer: 2D Art and Animation
Anran Bao - Anna: 2D Art and Animation
Chava Angeli Tóptou - Nyx : System Design, UI Design
Leshan Wang - Ethan : Sound Design, UI Design
Bogdan Panuta: Project Management, Game Design

◦While roles are divided, they are not definitive. All members took action in the development of the concept.

3. Project Sharing

◦The team has set up a git-hub repository for this project, along with a step-by-step guide for team members to set up GitHub and unity.

4. Folder Structure

◦The team has guide for asset naming and folders guide to provide unified naming conventions and proper organization.

Design

1. Design Goals

◦Intended experience is for players to relax. Thus, mechanics that require eye/ hand coordination, mental focus, etc. were avoided.

2. Serious Goals

◦Management: For the serious game aspect, workshop and production were focal systems.

◦Simplicity: While production is the biggest aspect of the game, it was intentionally kept simple to also include people who don't prefer digital games, as the game's goal is to attract people to the Opera.

3. Main Aesthetic

◦Creativity and Expression: The Opera game aims to provide players tools to use their creativity in order to express themselves. This is done through modifying in-game assets, and designing Opera scenes that players try to explain a word, similar to a charade game.

◦Entities that provide self expression are props, costumes, actors and music. These assets can be colored, flipped, rotated on a stage or be chosen among a list to be used on the stage.

4. Limitations

◦Interaction: Player interactions were limited to emojis, in order to omit systems that would require developer monitoring (such as report systems).

◦Single- Players: Players who do not wish to use share function or interaction were kept in consideration.

◦Complexity: Time and group size were one of the biggest factors for our design decisions.

Programming

Opera Project Program Document

Created @ 2022/10/14
Serious Games - Opera Team
Unity Version: 2021.3.8f1

1 Development Milestones

oThis is a basic timeline for the development of this project, the completed items will be colored green.

Touchable Object Test (Hold, Drag, Click, etc)

-Basic Camera Panning

-Touchable Object Actions (Translate, Rotation)

-Touchable Hold Secondary button Test (Hold -> Small Buttons -> Different Functionalities (rotate, translate, change color, etc))

-Prop Blueprint Scriptable Object Design /

-Test

-Stage Editing Test

-Resource System, Player Database, Storage limit

-Save / Load Test + Base Design

-Backstage View, Machines, Prop Building

-Navigation through Scenes / Views

-Blueprint packs, code redeem

2 System Designs

This part describes the various systems designed and used in this project, including desired uses, supporting features, etc.

2.1 Base Touchable Objects

2.2 Object Blueprint Scriptable Object
